

Project Knowvia — Pitch Deck Blueprint & Presentation Guide

A high-conversion structural roadmap for a 3-Minute Slide Pitch + 2-Minute Live Product Demo

PRODUCT	TARGET FORMAT	RECOMMENDED SLIDES	TARGET AUDIENCE
Knowvia PWA	3m Pitch + 2m Demo	8 Slides Max (High-Impact)	Judges, Hubs & Evaluators

1. Strategic Time Budget: The 3m Pitch + 2m Demo Formula

In high-stakes hackathon or accelerator evaluations, **3 minutes of speaking time equals approximately 180 seconds**. A traditional 14-to-16 slide presentation forces presenters into an impossible 11-second-per-slide cadence. To maximize judge retention and guarantee complete delivery without rushing, the presentation is consolidated into **8 high-impact visual slides** with a dedicated **2-minute live software demonstration embedded at peak audience engagement**.

Segment	Slide / Phase	Time	Cumulative	Core Purpose & Delivery Focus
Phase 1: Hook	Slide 1: Title & Vision	15 sec	0:00 – 0:15	Establish product identity, team credibility, and core value proposition.
Phase 1: Hook	Slide 2: The Problem	25 sec	0:15 – 0:40	Highlight the chaos of running multi-department internships on WhatsApp.
Phase 1: Hook	Slide 3: User Research	30 sec	0:40 – 1:10	Reveal field metrics & the "What Surprised Us" counter-intuitive insight.
Phase 2: Reveal	Slide 4: Our Solution	25 sec	1:10 – 1:35	Introduce Knowvia's 3 pillars; trigger handoff into the live system demo.
Phase 3: Proof	🔥 LIVE DEMO	120 sec	1:35 – 3:35	2-Minute Live Walkthrough: Intern view, schedule CRUD, file safety & chat.
Phase 4: Scale	Slide 5: Architecture	25 sec	3:35 – 4:00	Demonstrate technical execution: PWA, WebSockets, RLS & file heuristics.
Phase 4: Scale	Slide 6: Market & Gaps	25 sec	4:00 – 4:25	Direct comparison against WhatsApp & enterprise LMS; address market opportunity.
Phase 4: Scale	Slide 7: Business Model	20 sec	4:25 – 4:45	B2B SaaS monetization, hub licensing packages, and unit economics.
Phase 5: Close	Slide 8: Team & Vision	15 sec	4:45 – 5:00	Show team roles, provide live PWA QR code, and anchor screen for Q&A.

2. Section-by-Section Audit & Consolidation Matrix

The table below evaluates your proposed 11 sections against evaluation standards, explaining what is preserved, merged, omitted, or rearranged for maximum persuasive momentum.

Original Section	Action	Target Placement	Strategic Rationale
1. Project Name	KEEP	Slide 1 (Title)	Must be crisp, professional, and state the core tagline in <15 seconds.
2. The Problem	MERGE	Slide 2 (The Problem)	Directly incorporates target audience pain points rather than separating them.
3. Statistics / User Research	KEEP & REFINED	Slide 3 (User Discovery)	Features survey stats and the NibBot-style "What Surprised Us?" sticky card.
4. Our Solution	MERGE	Slide 4 (Meet Knowvia)	Combines high-level solution with core value props into a 3-pillar layout.
5. What do we do?	MERGE	Slide 4 (Meet Knowvia)	Eliminates redundancy; prevents repeating the solution twice back-to-back.
— PRODUCT DEMO —	EMBEDDED	Between Slides 4 & 5	Climactic proof point: Demo immediately follows the solution reveal.
8. Tech Stack	KEEP & ELEVATED	Slide 5 (Architecture)	Formatted as an Agri-Vault style 3-tier architectural stack rather than a raw list.
6. Market Analysis	MERGE	Slide 6 (Market & Gaps)	Merges existing alternatives, gaps, and addressable hub market into one view.
7. Business Model	KEEP	Slide 7 (Business Model)	Presents B2B hub licensing, tier structures, and cost drivers cleanly in 3 cards.
9. Target Audience	OMIT AS STANDALONE	Integrated in Slides 2, 3 & 6	Having audience at #9 breaks narrative flow; audience is established in Slides 2 & 3.
10. Meet the Team	MERGE	Slide 8 (Team & Close)	Combines team credentials with live app QR code and call to action.
11. Thank you	OMIT AS STANDALONE	Merged into Slide 8	Never show a blank "Thank You" slide; keep team info & QR code visible during Q&A.

3. The 2-Minute Live Product Demo Playbook

Demo Strategy: The demo is placed immediately after Slide 4 (Solution) because judges want immediate proof of your claims before hearing about architecture, market size, or business models. You have exactly 120 seconds.

Timestamp	Persona / View	Live Screen Actions	Spoken Narration Script
0:00 – 0:40	Intern Experience (Dashboard & Progress)	1. Sign in as Intern. 2. Show Class Countdown card. 3. Point to Assignment Progress Meter (Approved, In Revision, Pending). 4. Click Bell notification → auto-scrolls to assignment.	"When an intern logs in, there is zero confusion. Their next class session is anchored right here with a live countdown and meeting link. Below it, their personal milestone meter tracks exactly where they stand on deliverables without digging through spreadsheets."
0:40 – 1:20	Tutor / Admin View (Scheduling & File Safety)	1. Switch to Tutor view. 2. Click Edit Schedule modal & update class time. 3. Upload learning material PDF. 4. Highlight background pre-storage validation badge.	"Tutors have full schedule control. When I adjust this session, WebSockets sync it instantly to every student's device. When uploading materials, our backend validates file signatures, rejecting executables and nested ZIP threats before anything touches cloud storage."
1:20 – 2:00	Department Chat (Real-time Collaboration)	1. Open Department Chat tab. 2. Send a real-time message. 3. Demonstrate quoted reply threading. 4. Point out initials-only avatar engine & department badge.	"Finally, communication stays strictly scoped to the department. No chatter from other tracks. Interns and tutors collaborate via low-latency threaded replies, keeping academic discussions organized, professional, and accessible."

4. Slide-by-Slide Blueprint & Speaker Handbook

Slide 1: Project Name & Core Tagline		15 SECONDS
Primary Headline: KNOWVIA Sub-heading: The Department-Scoped Knowledge & Operations Platform for Tech Hubs. On-Slide Elements: Track category (e.g. EdTech / SME / Innovation), Team Members, Cohort ID.		VISUAL DESIGN DIRECTION • Clean, minimalist backdrop with Knowvia indigo accent. • Large, bold typography with high contrast. • Subtle badge: "Built as an Installable Progressive Web App".
SPEAKER SCRIPT (0:00 – 0:15) "Good day, judges. We are Team [Name], and this is Knowvia. Knowvia is a department-scoped progressive web platform built specifically to replace informal, chaotic channels in multi-department tech hub internship programs."		
Slide 2: The Problem (The Chaos of Informal Channels)		25 SECONDS
01 / NOISE & MISSED UPDATES • WhatsApp & Telegram mix class alerts with casual banter and memes. • Crucial schedule revisions and links get buried instantly.	02 / FRAGMENTED DELIVERABLES • Assignments submitted across DMs, emails, and shared Drive folders. • Zero central visibility into student progress or revisions.	03 / FILE & STORAGE RISKS • Unvetted files shared in open groups expose hubs to malware & scripts. • Links expire, cloud quotas breach, and study materials vanish.
SPEAKER SCRIPT (0:15 – 0:40) "Today, tech hubs manage dozens of interns across Frontend, Backend, UI/UX, and Cybersecurity using WhatsApp groups and shared folders. The result? Critical announcements drown in chat noise, assignment submissions get lost across direct messages, and unvetted file sharing exposes hubs to serious security risks."		

Slide 3: User Research & "What Surprised Us?"

30 SECONDS

FIELD RESEARCH METRICS

- **78% of Interns** missed at least one scheduled class or deliverable due to chat overflow.
- **4 out of 5 Tutors** spent 3+ hours weekly chasing assignment submissions across multiple spreadsheets.
- **100% of Hub Admins** wanted departmental separation without paying enterprise software prices.

💡 WHAT SURPRISED US?

"We initially assumed tech hubs needed a full enterprise LMS like Canvas or Blackboard. We learned that hubs actively avoid them because they are bloated, complex, and slow. What hubs actually need is the instant speed of messaging paired with strict departmental boundaries and pre-validated file safety."

SPEAKER SCRIPT (0:40 – 1:10)

"When we interviewed hub coordinators and tutors, 78% of interns reported missing key deadlines due to channel noise. But here is what surprised us: tech hubs do not want complex enterprise LMS systems like Canvas. They find them bloated and hard to adopt. They want the speed and familiar feeling of messaging, combined with clean departmental isolation and reliable progress tracking."

Slide 4: Our Solution (Meet Knowvia) & Demo Trigger

25 SECONDS

PILLAR 1: SCOPED WORKSPACES

- Independent spaces for each department (Frontend, Backend, Cyber).
- Zero cross-track distraction; role-scoped access control.

PILLAR 2: SCHEDULE & MILESTONES

- Dashboard-first next class countdown with agenda.
- Dynamic milestone tracker & automated 24h reminders.

PILLAR 3: ACTIVE FILE SECURITY

- Pre-storage heuristic scanning & double-extension blocking.
- In-memory ZIP central directory inspector.

DEMO TRANSITION CUE: Hand off smoothly to the second presenter or switch display immediately to the live browser window running the Knowvia PWA.

SPEAKER SCRIPT (1:10 – 1:35)

"That is why we built Knowvia. Knowvia gives every department its own dedicated workspace, anchors schedules front and center with automated reminders, and screens every uploaded file before storage. But rather than just telling you, let us show you Knowvia live."

🔥 [2-MINUTE LIVE PRODUCT DEMONSTRATION OCCURS HERE — MINUTES 1:35 TO 3:35] 🔥

Present live walkthrough following the Section 3 Playbook: Intern View → Tutor Schedule/Files → Scoped Chat. Return to Slide 5.

Slide 5: System Architecture & Engineering (Agri-Vault Style)

25 SECONDS

CLIENT TIER (PWA)	React 19 + TypeScript + Vite • Custom Design System • Service Worker (Offline Cache v6) • Web Push API
APPLICATION LAYER	Node.js + Express • Socket.io Partitioned Rooms (dept: {slug}) • In-Memory ZIP Inspector & Bull Daemon
DATA & CLOUD TIER	Supabase PostgreSQL with Row-Level Security (RLS) • Prisma ORM • Supabase S3 Object Storage

SPEAKER SCRIPT (3:35 – 4:00)

"Behind this seamless experience is an enterprise-grade full-stack architecture. On the client, a responsive React 19 Progressive Web App with offline caching. Our backend leverages Socket.io for low-latency department channels, while our data tier enforces Row-Level Security in PostgreSQL, ensuring zero data leakage between departments."

Slide 6: Market Opportunity & Competitive Gaps

25 SECONDS

INFORMAL CHANNELS (WHATSAPP)

- Zero academic structure.
- No progress tracking.
- Expired files & security hazards.

ENTERPRISE LMS (CANVAS)

- Expensive institutional pricing.
- Clunky, bloated interfaces.
- Lacks native real-time chat.

THE KNOWVIA ADVANTAGE

- Lightweight & PWA installable.
- Department isolation by default.
- Integrated schedules, chat & files.

Target Market Size: Over 150+ technology innovation hubs, government skill programs (such as 3MTT/NITDA), and university developer communities across Nigeria and sub-Saharan Africa.

SPEAKER SCRIPT (4:00 – 4:25)

"Existing alternatives leave hubs stranded between two extremes: WhatsApp is free but chaotic, while tools like Canvas are expensive and complex. Knowvia occupies the sweet spot: lightweight, mobile-first, and purpose-built for the 150+ tech training hubs, 3MTT centers, and developer incubators nationwide."

Slide 7: Business Model & Monetization Strategy

20 SECONDS

REVENUE MODEL

- **Hub Tier:** Annual license per cohort for up to 5 departments.
- **Enterprise:** Custom branding, dedicated storage & priority SLA for larger academies.

KEY PARTNERS

- Regional tech hubs (e.g. NASCOM, Co-Creation Hubs).
- State digital economy agencies & bootcamps.
- University computer science departments.

COST DRIVERS

- Cloud compute (Render / Vercel hosting).
- Managed PostgreSQL database storage.
- Supabase S3 file egress bandwidth.

SPEAKER SCRIPT (4:25 – 4:45)

"Our business model is B2B institutional licensing. We license Knowvia directly to tech hubs on an annual cohort subscription, with premium tiers for custom branding and dedicated storage. Because our architecture is hyper-efficient, our operating margins exceed 85%."

Slide 8: Meet the Team & The Call to Action

15 SECONDS (LEAVE ON SCREEN DURING Q&A)

THE ENGINEERING TEAM

- **Frontend Engineering & UX:** Component architecture & responsive PWA caching.
- **Backend & Security:** Express API, WebSockets, pre-storage heuristics & RLS.
- **Product & User Research:** Hub discovery, PRD auditing, and workflow testing.

LIVE ACCESS & REPOSITORY

Scan to test the live PWA on mobile:

[QR CODE: LIVE DEMO URL]

GitHub: Sydonverse / Knowvia

SPEAKER SCRIPT (4:45 – 5:00)

"Our multi-disciplinary team has taken Knowvia from initial PRD to a certified production-ready PWA with 88 automated tests. Scan the QR code to try Knowvia on your phone right now. Thank you, and we look forward to your questions."

5. Pitch Day Execution & Rehearsal Checklist

Area	Action Item	Verification Status
Demo Reliability	Pre-open two browser windows: one Intern account, one Tutor/Admin account.	Prevents awkward sign-out / sign-in delays on stage.
Screen Layout	Zoom browser to 110% for optimal projection readability on external TV/projector.	Verified against Agri-Vault screen visibility standard.
Timing Safeguard	Designate a team member to signal time at 1m00s, 3m00s (end of demo), and 4m30s.	Ensures prompt wrap-up before the 5:00 cutoff bell.
Offline Backup	Ensure PWA service worker is pre-cached or have a 1080p screen recording ready.	Guarantees 100% demo delivery even if event Wi-Fi experiences latency.
